As part of the long-term lease with the GTAA, Bombardier (BBD) has constructed a 750,000 square foot manufacturing facility on 41 acres on the northwest side of the airfield, north of Runway 05. The BBD facility, which has been granted conditional occupancy, is entirely groundside, aircraft will access the airfield via new Gate 322A. The BBD facility, including the private apron, will be independently maintained by BBD. Operations and Emergency Response will be coordinated with the GTAA.

The newly constructed Taxiway Juliet Charlie is now operational. Bombardier aircraft will use Taxiway Juliet Charlie to access the airfield to perform aircraft tests (including, but not limited to, brake tests and engine runs). This Taxiway will have an access gate (Gate 322A) that is controlled by Bombardier.
