

Advisory # 2018-A-032

Subject: Ground Frequency 121.65 Unavailable Nightly
0001-0530L June 5-8, 2018

From: Aviation Services

Contact: Marjorie Thompson, Associate Director, Ground Operations,
416-776-2794, Marjorie.Thompson@gtaa.com

Date: 2018-06-04

Due to construction work inside the NAV CANADA Control Tower cab, controllers will be required to work out of the Area Control Centre (ACC) on a nightly basis 0001-0530L from June 5 to June 8. During this time, the North Ground frequency 121.65 will be unavailable and all ground control communications will be on the South Ground frequency 121.9. 'D' AVOP drivers are required to call for clearance on 121.9 when requesting to enter the maneuvering area. Please be mindful of frequency changes as instructed by the Apron Management Unit (AMU) or NAV CANADA controllers.
