

Advisory # **2020-A-047**

Subject: Terminal 1 East Pier D Crack Sealing

From: Airport Operations

Contact: Cedric Daros, cedric.daros@gtaa.com , 416-776-5854

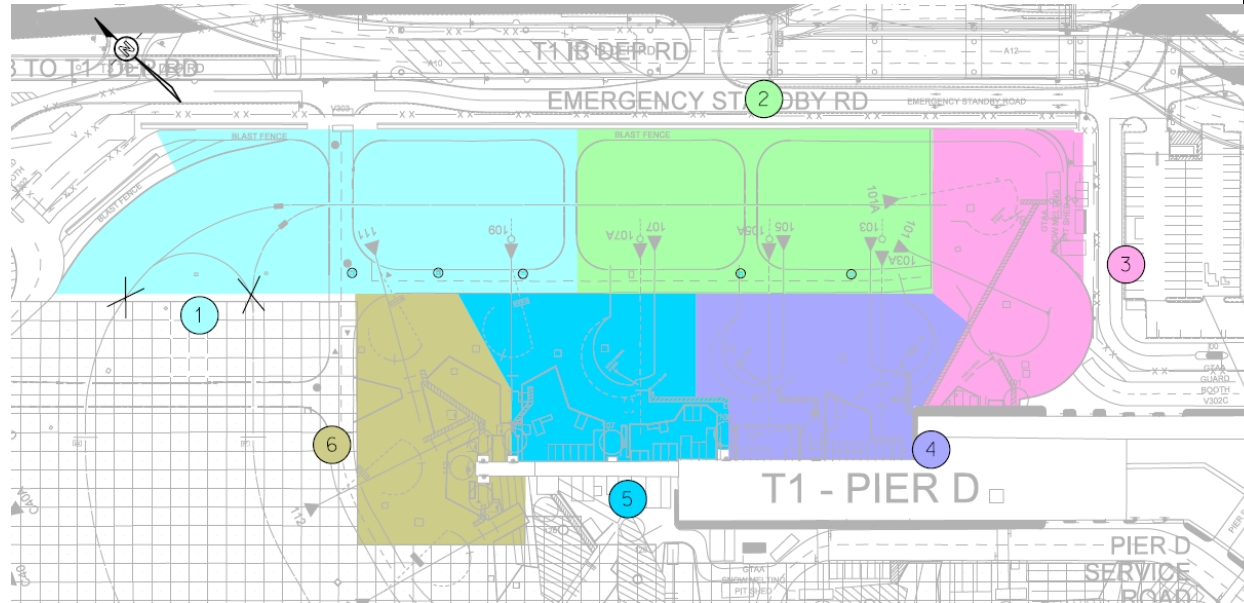

Date: 2020-07-23

The area of Terminal 1 East Pier D will be closed in phases for nightly work for a period of up to four (4) weeks commencing on July 27, 2020, between the hours of 2300-0600L. These closures will facilitate crack sealing on the apron and aircraft stands and may be performed in any order as is operationally viable.

As a result of these closures:

- Gates between gates 101A and 110 will be closed in groups during work hours (aircraft may remain parked on gates not affected by work, with no access for towing until work is completed for that night).
- Taxilane will be closed in phases. Aircraft may be restricted from associated gates accordingly.
- East radius connecting Taxilane 5 and 6 will be affected for several nights with the area demarcated accordingly.
- Access to the vehicle fuel pumps between the terminals as well as Vehicle Gate 303 remains open for the duration, however we request operators minimize travel through this area while work is taking place.

Please be aware of non-standard aircraft movements and vehicle movements in the area of Terminal 1 East Pier D.

If you have any questions or concerns regarding this work, please contact Cedric Daros, cedric.daros@gtaa.com.
