

# DISPOSE OF FOD PROPERLY

## FOD is foreign object debris

Whether it's tools, garbage, rocks or mechanical parts, if it's not supposed to be there – it's **FOD**.

### **Remove it or report it right away.**

Dispose of FOD in UPAK bins or FOD bins located near each bridge head.

### **Practice good habits:**

- Keep your work areas clean.
- Close UPAK or garbage bins after use.
- Report bins that are full or damaged.
- Dispose of personal garbage before going out into baggage laterals and apron (or airside).

### **FOD bins should only be for FOD.**

Any hazardous materials (e.g., empty oil cans) and international waste (aircraft garbage) need to be disposed of properly.
